(54) FORMULA PROCESSOR WITH INSTRUCTION-LIKE LOGICAL CONTROL GATES

(57) Abstract:
FIELD: computer engineering, in particular, computers designed for complex programming languages. SUBSTANCE: device has arithmetic and logical unit, unit of registers of arithmetic and logical unit, control unit, unit of registers of control unit, control automaton state register, control circuits for executing control instruction. EFFECT: facilitated human-computer interface, setting dependence between software units during run-time. 6 dwg, 2 tbl
